

Docker-01 task

- Create new custom image from Dockerfile
- Container executed from this images must return date when request come to /date url
- Example if I curl to 172.17.0.2/date container must return date and word (even or odd)
- If date end with odd second return "21:59:25 ODD" if with even number then "21:59:26 EVEN"
- For scripting you can use all languages which you now, also can use chatgpt for that
- After when image is done test it.
- Then you need to up Sonatype nexus application (image sonatype/nexus3)
- Create docker hosted repository on it
- upload your image to it!
