

Docker_Task:

- Use this Java application shared via this link:
<https://gitlab.com/seymuralye/myapp>
- Create a **Dockerfile** that builds the code using the **Maven latest package** command. In the last line of the Dockerfile, use **CMD** to run the **JAR** file.
- Run this image.
- If everything is correct, you can verify it with ``curl IP:PORT/api/v1/date`` (don't forget to take a screenshot of your result).
